

MICHAEL AHCANN

ENGINEERING GRADUATE 2016

Full Time Role:
Project Engineer

Rotations

1. Engineering Projects Department
2. Major Projects

Highlight: Major Projects

Procured New Valves and Equipment, Prepared and Co-ordinated Tie Ins to Existing Plants, Flushed and Pressure Tested New Lines, Executed Qualification Documentation, Installed Tanks, Pumps and Other Equipment and Tested and Commissioned Equipment and Processes

One of my opportunities was on a major project to double the capacity of one of our intravenous immunoglobulin manufacturing facilities. Instead of driving my own projects, I was now a part of a much larger team working to procure, install, commission and qualify all the equipment required for a world class pharmaceutical facility. The tight project timeline quickly taught me the value in outlining important objectives and prioritising based on interdependencies and schedule. This project also demonstrated to me that strong team work and a positive team culture is one of the defining features of a successful project.
