

**SUYA HE**

**ENGINEERING GRADUATE 2016**

Full Time Role:  
Production Engineer

## Rotations

1. Automation
2. Production Engineering
3. Utilities Engineering

## Highlight: Production Engineering

Decommissioning equipment, Quality Management Systems and Automation/Commissioning of a Chromatography system.

Seeking opportunities to apply my chemical/process engineering experience, I asked to be placed in the Production Engineering group. The pivotal moment of the graduate program was when I became responsible for the automation and qualification of a chromatography process - the goal being to reduce processing times by at least 2-3 fold, improve process control and simplify equipment cleaning. I learnt I enjoyed the hands on work, and optimising manufacturing processes.
